

## MBA 690 Module Four Short Paper Guidelines and Rubric

In Module Four, you will prepare a written plan and identify the means of production you intend to use for the new business opportunity.

**Prompt:** Building on the discussion in this module, consider the following:

- What tools/techniques were used in your design, such as quality function deployment, value stream mapping, and JIT? What technologies were used to support your design, such as concurrent engineering, computer-aided design, or value analysis?
- Describe how you incorporated the concepts of lean operations and lean services in your design.
- Identify the considerations needed for the sustainability of your production line and what specific efforts can minimize waste; consider end-of-life programs and the three R's (reduce, reuse, recycle). Consider the phases of product design in your paper.
- As it applies to your business opportunity, consider the legal, cultural, global, and human involvement needed in your design as outlined in Chapter 4.

Note: It is not intended that you include the actual design of the product/service, but this paper needs to describe how you intend to create this design considering the topics in Chapter 4 and incorporate lean operations into your design.

Specifically, the following **critical elements** must be addressed:

- Identify the tools, techniques, and technologies used in the design of your production plan.
- Explain how you will integrate lean operations and lean services in your production plan.
- Discuss your considerations for **sustainability** to eliminate waste in each phase of your production plan.
- Discuss the legal, cultural, global, and human **involvement** needed to implement your production plan.

**Guidelines for Submission:** This short paper should adhere to the following formatting requirements: It is submitted as a Word document, 1 to 2 pages (not including title and reference pages), double-spaced, using 12-point Times New Roman font and one-inch margins. All APA citations should reference the course text and at least two additional resources.

Critical Elements	Proficient (100%)	Needs Improvement (75%)	Not Evident (0%)	Value
Tools, Techniques, and	Identifies the tools, techniques, and	Identifies the tools, techniques, and	Does not identify tools, techniques,	22
Technologies	technologies used in the design of	technologies used in the design of	and technologies used in the design	
	production plan and includes a	production plan, but lacks detailed	of production plan	
	detailed explanation of choices	explanation of choices		
Lean Operations/Lean	Explains plan to integrate lean	Explains plan to integrate lean	Does not explain plan to integrate	22
Services	operations and lean services and	operations and lean services, but	lean operations and lean services	
	provides rationale for selection	lacks rationale for selection		

Sustainability	Discusses considerations made for	Discusses considerations made for	Does not discuss considerations made	23
	sustainability to eliminate waste and	sustainability to eliminate waste, but	for sustainability to eliminate waste	
	includes detailed explanation of	lacks detailed explanation of decision		
	decision			
Involvement	Discuss the legal, cultural, global, and	Discuss the legal, cultural, global, and	Does not discuss the legal, cultural,	23
	human involvement needed to	human involvement needed to	global, and human involvement	
	implement plan with detailed	implement plan, but lacks detailed	needed to implement plan	
	consideration for each topic	consideration for each topic		
Articulation of Response	Submission has no major errors	Submission has major errors related	Submission has critical errors related	10
	related to citations, grammar,	to citations, grammar, spelling, syntax,	to citations, grammar, spelling, syntax,	
	spelling, syntax, or organization	or organization that negatively impact	or organization that prevent	
		readability and articulation of main	understanding of ideas
