#### Assignment Description

Health care organizations such as Choice Hospital must keep up to date with new initiatives related to reimbursement by third-party payers for services provided. This is especially true for Medicare reimbursement and initiatives tied to legislation such as the Affordable Care Act and the 21st Century Cures Act.

You are working with the chief financial officer and his team on two types of statistics related to Medicare reimbursement initiatives:

1. Medicare spending per beneficiary (MSPB)
2. Hospital readmission rates

You will be working with the finance team to prepare a presentation for the CEO and executive leadership team to help them understand these requirements. Your presentation should be 5-7 slides (100-150 words per slide, not including the title and reference slides) with APA formatting. Cite at least 2 scholarly reference articles or government publications that were published within the last 3-5 years.

Your presentation should address the following for both the MSPB and hospital readmission rate statistics:

- Describe the Medicare program or initiative that uses the statistic.
- Is it an incentive- or penalty-type program related to the rate of Medicare reimbursement?
- Are the statistics and the program or initiative tied to performance, for example improving quality of care? If so, how?
- Which legislation is authorizing the Centers for Medicare and Medicaid Services (CMS) to initiate these programs?
- Define the statistic and how it is calculated.
- Provide examples of these statistics from publications or government sites. For many of the CMS initiatives, data for health care institutions is made available through the CMS Hospital Compare Web site.

Cite all references using APA formatting.

**For assistance with your assignment, please use your text, Web resources, and all course materials.**

#### Reading Assignment

Horton: Chapter 14

#### Assignment Objectives

- Compile and present healthcare data to monitor utilization and quality of healthcare services.
- Conduct evidence-based research utilizing appropriate healthcare data from government and other healthcare organization resources.
- Use healthcare data to identify areas of improvement in operations, finance, and delivery of quality care and evaluate compliance with laws, regulations and accreditation standards.
