

1. Your essay should be typed in Times New Roman, 12 size font, 1½ spaced format, one inch margins all around, and justified (both left and right/Ctrl+J). Page orientation must always be “Portrait.”
  2. You may use no more than 3 pages for your paper, including graphs, figures and tables, but excluding references and appendix.
  3. You are encouraged to use outside sources (references) to back up your points (this is a scholarly assignment). Scholarly exercise implies using predominantly sources of vetted content such as journal papers and conference proceedings. Newspaper articles and websites can be used to support the discussion, but the latter (websites) often host content that is not vetted and as such cannot form the bulk of your research.
  4. Use APA format only for citation.
  5. Acceptable file formats for text: doc, docx, and pdf ONLY
- Good luck.
- 

Provide an example, written description, of any systems concept, from General Systems Theory (equifinality, neg-entropy, homeostasis, isomorphism, etc.) that you believe is representative of that concept. You have full freedom to choose the subject matter (story, personal experience, movie, poem, literature, sports event, etc). You must provide a physical example of what you are describing (i.e. if you present a systems concept you found in a movie or a poem, you must provide a video clip of the movie or a copy of the poem with your write-up). Your write-up must be written in such a way that a junior high school student would be able to read your assignment and understand the concept you are describing.
